

Product Specification

PE4280

75 Ω SPDT CATV UltraCMOS" Switch 5 MHz - 2.2 GHz

Features

- 75 Ω characteristic in per
- Integrated 75 2 terminations
- CTB performance of 85 dBc
- High is oration of dB at 1 GHz
- Low insertion loss: typically 0.5 dB at z, 1.1 dB at 1 GHz
- input IR3: 50 dBm
- two-pin control
- 3 V supply operation
- urrent consumption: 8 μΑ
- que all off terminated mode
 - x 4 x 0.85 mm QFN package

Product Description

The PE4280 is an UltraCMOS™ Switch designed for CATV applications, covering a broad frequency range from 5 MHz up to 2.2 GHz. This single-supply SPDT switch integrates a two-pin CMOS control interface. It also provides low insertion loss with extremely low bias requirements while operating on a single 3 V supply. In a typical CATV application, the PE4280 provides for a cost effective and manufacturable solution when compared to mechanical relays.

The PE4280 is manufactured on Peregrine's UltraCMOS™ process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS.

Table 2. Pin Descriptions

No.	Name	Description
1	GND	Ground
2	GND	Ground
3 ¹	RF1	RF I/O
44	GND	Ground
5	GND	Ground
6	GND	Ground
7 ⁴	GND	Grount
8 ¹	RFC	Cymnon
9 ⁴	GND	dispund
10	GND	round
11	GND	Ground
12 ⁴	GND	Sul,
13 ¹	RF2	1/0
14	GND	Ground
15	CND	Ground
16 ²	C2	Control 2
17 ²	C1	Control 1
18 ³	V _{ss} /GND	Negative Supply Option
15	GND	Ground
	V_{DD}	Supply
Paddle	GND	Exposed Ground Paddle

Notes: 1. RF pins 3, 8, and 13 must be at 0 VDC. The RF pins do not require DC blocking capacitors for proper operation if the 0 VDC requirement is met.

- 2. Pins 16 and 17 are the CMOS controls that set the three operating states.
- 3. Connect pin 18 to GND to enable the on-chip negative voltage generator. Connect pin 18 to V_{SS} (-3 V) to bypass and disable internal -3 V supply generator. Also, see paragraph "Switching Frequency."
- 4. Customer can add external resistance to ground to change or modify termination resistance.

Table 3. Absolute Maximum Ratings

Symbol	Parameter/Condition	Min	Wax	Unit
V_{DD}	Power supply voltage	Ġ	4.0	٧
Vı	Voltage on any DC input	Ġ	V _{DD} + 0.3	V
P _{RF}	RF CW power		24	dBm
T _{ST}	Storage temperatule	-65	150	° C
T _{OP}	Operating tempera ure	-40	85	° C
V _{ESD}	ESD voltage (Humon Bady Model)		1000	V

Exceeding absolute maxinum ratings may cause permanent Jamage. Operation should be restricted to the limits in the Operating Ranges table. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

Table 4 Operating Ranges @ 25 °C

Parameter	Min	Тур	Max	Unit
V _{DD} Power Supply	2.7	3.0	3.3	V
I _{DD} Power Supply Current (V _{DD} = 3 V)		8	20	μА
Control Voltage High	70% V _{DD}			V
Control Voltage Low			30% V _{DD}	V

Electrostatic Discharge (ESD) Precautions

When handling this UltraCMOS device, observe the same precautions that you would use with other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the

Moisture Sensitivity Level

The Moisture Sensitivity Level rating for the PE4280 in the 20-lead $4 \times 4 \times 0.85$ mm QFN package is MSL1.

Evaluation Kit

The SPDT Switch Evaluation Kit board was designed to ease customer evaluation of the PE4280 SPDT switch. The RFC port is connected through a 75 Ω transmission line to J2. Port 1 and Port 2 are connected through 75 Ω transmission lines to J1 and J3. A through transmission line connects F connectors J4 and J5. This transmission line can be used to estimate the loss of the PCB over the environmental conditions being evaluated.

The board is constructed of a four metal layer FR4 material with a total thickness of 0.062". The transmission lines were designed using a coplanar waveguide with ground plane (28 mil core, 21 mil width, 30 mil gap).

J6 provides a means for controlling DC and digital inputs to the device. The provided jumpers short the package pin to ground for logic low. When the jumper is removed, the pin is pulled up to V_{DD} for logic high.

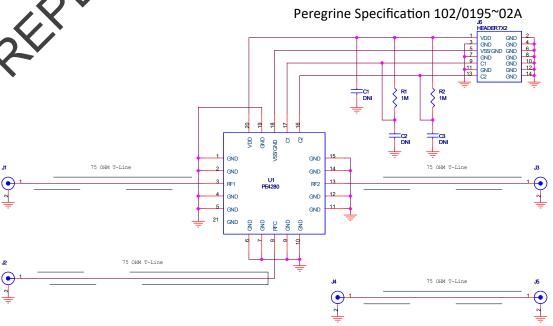

When the jumper is in place, 3 μ A of current wild low through the 1 M Ω pull up resistor. This ext a current should not be attributed to the requirements of the device.

Proper PCB design is essential for unisolation performance. This eval board temonistrates good trace and ground management for minimum coupling and rediction.
